

Oxygen Phone Manager II for Nokia phones

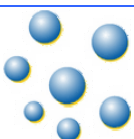

<http://www.oxygensoftware.com/>

Oxygen Phone Manager II is the most complete communication software tool for Nokia mobile phones available today. It offers a unique combination of features for managing the content and settings of your mobile phone from a personal computer.

Oxygen Phone Manager II at a glance:

- **The most complete set of Nokia mobile phone features accessible from PC.** You can organize your phonebook, events, tasks and notes, gallery, profiles, FM radio, GPRS and WAP options, call lists and voice records. You also can upload new wallpapers and ringing tones, send and receive SMS, create and view MMS messages, backup and restore all information, synch your phone with Microsoft Outlook - and all this in seconds and without complexity.
- **Makes your PC a keyboard and display of your mobile phone.** Edit your phone data easily from PC and see what you've got in the phone immediately on your PC display. No need to make synchronization to add or modify a couple of contacts. Easy ad-hoc editing of your data.
- **More than 150 Nokia models are currently supported. And the list is rapidly growing.** If your model is not supported yet, it means either it will be supported in the next release or it can not be connected to PC for data exchange at all.
- **It takes only few minutes to transfer your personal information and settings from your old phone to a new one.** All your contacts, events, tasks, SMS and MMS messages, images and melodies, profiles, FM stations, WAP and GPRS settings will migrate to your new phone with several mouse clicks. Even if your new phone model differs from the old one, Oxygen Phone Manager knows how to transfer all the data correctly.
- **You can lose your Nokia, but you will never lose your data.** The copy of mobile phone information and settings is stored on your local hard disk which is more secure than remote Internet storages. Even if your phone was stolen or damaged, its data is still available and can be easily transferred to a new phone. Backup files can be protected with individual passwords.
- **Not only for Nokia.** The future of mobile phones market is smartphones. High resolution camera, large memory capacity, melodious ringing tones, powerful phonebook supporting thousands of contacts each having personal image and ringing tone, advanced messaging system with unlimited SMS length and e-mail messages support, and so on. You really need smart PC software to cope with your smart phone. And Oxygen Phone Manager II for Symbian phones is the unique PC software for interactive data management working with Nokia, Sony Ericsson, Motorola, Samsung, Siemens, Panasonic, Vodafone, Sendo, BenQ and other smartphones based on Symbian OS.
